

ACTIVITY BRIEF

Basic Education Program

Women and technology

Application of recent technology in the learning process is important to improving the quality of education.

The Basic Education Program is designed to assist Kosovo educational institutions to carry out reforms that will help further economic development of the country, including the decentralization and community involvement to improve the local management of primary schools; improving learning outcomes of primary school students through assessments; and improve teacher professional development through training centers and programs.

These objectives will be carried out through a five-year partnership with the Ministry of Education, Science and Technology, municipal directorates of education, school directors and teachers.

USAID's Basic Education Program will assist in:

- Improving management of primary schools in 20 municipalities;
- Training 13,000 teachers and school administrators (in interactive methods, educational technology, and learning assessment);
- Ensuring primary school students benefit from improved teaching methods and learning assessment approaches, and
- Complying with IMF mandated recommendations to increase civil service productivity

Budget:

\$9.7 million USAID

€5 million GoK

Key Partners/Counterparts: Ministry of Education, Science and Technology, municipal directorates of education, school directors and teachers. The Kosovo Education Center (KEC) is our local sub partner.
